

AGHASI KHACHATRYAN

SENIOR JAVA SOFTWARE ENGINEER

+37494657895

mailto:khachatryan96@gmail.com

Armenia, Yerevan, Avan, Charents district

SUMMARY

A skilled Java and Go developer with proven expertise in leveraging modern tools and technologies to drive improvements across the software development lifecycle. Possess extensive full-cycle experience, strong analytical and problem-solving skills, and the ability to collaborate effectively with teams to design and refine functionality. Seeking an ambitious company to further develop my technical expertise and contribute to impactful projects.

WORK HISTORY

OMD

Senior Java Software Engineer - Sep. 2024 - Present

XCELFORCE (UBER)

Go Backend Developer - Jul. 2024 - Dec. 2025

ENERGIZE GLOBAL SERVICES

Java Software Engineer - Jul. 2023 - Jul. 2024

SMART CODE

Java Trainer - Jul. 2023 - Present

I-TECH

Java Software Engineer - Aug. 2022 - Jul. 2023

CODEEX

Java Software Engineer - Aug. 2020 - Aug. 2022

PICSART ARMENIA

Java Developer Trainee - Feb. 2020 - Aug. 2020

LANGUAGES

ENGLISH

Upper-Intermediate

RUSSIAN

Fluent

ARMENIAN

Native

EDUCATION

BACHELOR OF FACULTY OF INFORMATICS AND COMPUTER SCIENCE

University of NUACA - 2014-2018

SKILLS

- JAVA SE/EE
- SPRING (MVC)
- SPRING BOOT (SECURITY, CLOUD...)
- MICRONAUT
- SOLID
- CLEAN CODE
- DESIGN PATTERNS
- ALGORITHMS
- DATA STRUCTURE
- MULTITHREADING
- MICROSERVICE ARCHITECTURE
- OBJECT-ORIENTED PROGRAMMING
- ASPECT-ORIENTED PROGRAMMING
- REST-FULL WEB SERVICES
- SPECIFICATION (SPRING DATA JPA)
- HIBERNATE
- SPRING DATA
- MYBATIS
- FLYWAY
- LIQUIBASE
- MYSQL
- POSTGRES SQL
- MONGODB
- REDIS
- KAFKA
- LOMBOK
- MAVEN
- GRADLE
- APACHE POI
- APACHE CAMEL
- TAPESTRY
- GIT
- JIRA
- AGILE
- JUNIT5
- DOCKER
- KUBERNETES
- NGINX
- LINUX
- AWS (EC2, S3, LAMBDA, SNS, IAM, ECR)
- CI/CD (GITHUB ACTIONS, GITLAB)
- Go (Golang)
- Uber Fx
- Goroutines
- gRPC
- Arcanist
- Grafana

PROJECTS

Project: Tick Data

About The Project: A financial data analytics platform providing historical market data, tick-level data processing, and analytics solutions for trading and quantitative research.

Company: OMD

Project Role: Senior Java Developer

Tasks Performed

- Developed and maintained multiple reactive microservices using Java and Micronaut for scalable backend systems.
- Designed and implemented REST APIs for internal and external services.
- Implemented authentication, authorization, JWT token management, and role-based access control.
- Developed pageable and searchable APIs with filtering and sorting support.
- Integrated OpenAPI for API documentation and code generation.
- Improved system performance, scalability, and maintainability through refactoring and optimization.
- Implemented validation, exception handling, and reusable common libraries.
- Wrote unit and integration tests for backend services.
- Participated in microservice architecture and system design discussions.

Environment and Tools Used

Java, Micronaut, PostgreSQL, Flyway, R2DBC, OpenAPI, Docker, Git, Linux, REST APIs, Kubernetes, AWS, CI/CD

Project: Cloud Resource Optimization Platform

About The Project: Internal platform for managing cloud resource allocation, quota tracking, and cost optimization across multiple cloud providers (OCI, GCP, Odin).

Company: Uber

Project Role: Go Backend Developer

Tasks Performed

- Development of backend architecture and service components in Go.
- Implementation of high-performance concurrent data processing using goroutines, sync.WaitGroup, and sync.Mutex.
- Utilized gRPC for providing APIs and enabling real-time quota and cost analytics.
- Developed data aggregation, calculation, and reporting logic across multiple cloud providers.
- Refactored and optimized existing code to improve performance, scalability, and maintainability.
- Implemented structured logging and metrics for observability, performance tracking, and troubleshooting.
- Created automated unit and integration tests to ensure code reliability and stability.
- Collaborated with cross-functional teams to align backend functionality with product and business goals.

Environment and Tools Used

Go, gRPC, MySQL, Gorm, YAB, Concurrency (goroutines, sync.WaitGroup, Mutex), Structured Logging, Metrics, Git, Arcanist, Linux, Docker

PROJECTS

Project: PGUI

About The Project: Bank Management System

Company: Energize Global Services

Project Role: Senior Java Software Engineer

Tasks Performed

- Development of application architecture.
- Development of new features.
- Development of REST API with implementation.
- User management.
- Search functionality.
- Database maintenance.
- Participated in architectural decisions.
- Participated in discussions to build modern applications.

Environment and Tools Used

Java 11, Spring Boot, Tapestry, Keycloak, Camel, Oracle, REST services, Maven, Hibernate, Liquibase, Git.

Project: SoulsHub

About The Project: SoulsHub is an innovative platform where you can interact with official and highly accurate AI representation of famous personalities, historical figure and mentors.

Company: SoulsHub

Project Role: Architectural solutions and Devops engineer

Tasks Performed

- Assess current system architecture and identify areas for improvement.
- Design scalable and resilient architecture to support application and database requirements.
- Configure Nginx and Cloudflare.
- Choose appropriate technologies and tools based on requirements.
- Set up continuous integration (CI) pipeline to automatically build and test code on every commit.
- Enforce quality gates and approval processes before merging changes into main branch.
- Notify developers of test results and status of merge request.
- Configure continuous deployment (CD) pipeline to deploy docker image to staging and production environments.
- Dockerize application components using Docker containers.
- Create Dockerfiles to define build steps for containerization.
- Automate Docker image creation using GitHub Actions workflows.
- Push Docker images to GitHub Container Registry for version control and distribution.
- Provision EC2 instances on AWS for hosting application and database.
- Configure security groups and IAM roles for EC2 instances.
- Set up automated database backups using AWS S3.
- Configure scheduled backup jobs to regularly backup database to S3 bucket.
- Implement version control for both application code and database schema.
- Automate rollback Database and Application to Specified Version (Commit)

Environment and Tools Used

Git, Github Actions, Github Container Registry, Nginx, Cloudflare, Docker, S3, EC2, IAM, Linux

PROJECTS

Project: Click-market

About The Project: E-commerce platform for the purchase and delivery of flowers

Company: I-Tech

Project Role: Java Backend Developer (Solo)

Tasks Performed

- Designing database architecture.
- Development of application architecture.
- Development of REST API with implementation.
- Development of security parts based on JWT.
- User management.
- Order management.
- Payment integration.
- Search functionality.
- Notification functionality.
- File upload functionality to Google Cloud.
- Database maintenance.
- Migrations.
- Deployment.
- Participated in architectural decisions.
- Participated in discussions to build modern applications.

Environment and Tools Used

Java 17, Spring Boot 3, Spring Security, Spring Cloud, Specification Spring Data, Relational Databases, PostgreSQL, Kafka, REST services, Maven, Docker, Kubernetes, CI/CD, Hibernate, Liquibase, Git.

Project: Audit Trail

About The Project: Service for logging user functionality (update, create, delete)

Company: I-Tech

Project Role: Java Backend Developer (Solo)

Tasks Performed

- Designing of database architecture.
- Designing of application architecture (multi-module).
- Development of REST API with implementation.
- Development of security parts based on JWT.
- Search functionality with Elasticsearch and MongoDB
- Developing functionality to consume messages from Kafka
- Create CI/CD pipelines
- Dockerization of project

Environment and Tools Used

Java 17, Spring Boot 3, Spring Security, Spring Data Elasticsearch, Spring Data MongoDB, Elasticsearch, MongoDB, Kafka, REST services, Maven, Docker, CI/CD, Git.

PROJECTS

Project: TMT

About The Project: GPS tracking system which allows logistics companies to track their trips with a simple smartphone.

Company: I-Tech

Project Role: Java Backend Developer

Tasks Performed:

- Development of REST API with implementation.
- Development of security parts based on JWT.
- User management.
- Payment integration.
- Search functionality.
- Notification functionality.
- File upload functionality to AWS(S3).
- Database maintenance.
- Code review.
- Migrations.
- Participated in architectural decisions.
- Participated in discussions to build modern applications.

Environment and Tools Used

Java 11, Spring Boot, Spring Security, Spring Cloud, Specification Spring Data, Relational Databases, MySql, Kafka, SSE, REST services, Maven, Docker, CI/CD, Hibernate, Liquibase, Git.

Project: T3 TMS

About The Project: A transportation management system is built to help logistics companies plan, schedule, and dispatch their trips.

Company: I-Tech

Project Role: Java Backend Developer

Tasks Performed:

- Development of REST API with implementation.
- Development of security parts based on JWT.
- User management.
- Search functionality.
- Notification functionality.
- File upload functionality to AWS(S3).
- Database maintenance.
- Code review.
- Migrations.
- Participated in architectural decisions.
- Participated in discussions to build modern applications.
- End-to-end automated testing(Unit/Integration test).

Environment and Tools Used

Java 11, Spring Boot, Spring Security, Spring Cloud, Specification Spring Data, Relational Databases, MySql, Kafka, SSE, REST services, Junut5, Maven, Docker, CI/CD, Hibernate, Liquibase, Git.

PROJECTS

Project: MLM

About The Project: MLM multi-level marketing is a platform where users can buy products and be a part of the business, also he can invite other people and work on them.

Company: Codeex

Project Role: Java Backend Developer

Tasks Performed:

- Build a Micro-Service product with the capability of providing white labels.
- Changing Monolith architecture to Micro-service architecture.
- Clean-up after separation of the project into micro-services.
- Development of REST API with implementation.
- Development of authorization server (micro-service).
- Development of an E-commerce platform (micro-service).
- Development of security parts based on PASETO.
- Designing database architecture.
- Development of DB design for user management.
- Participated in discussions to build modern applications.
- Participated in architectural decisions.
- Code review.

Environment and Tools Used

Java 17, Spring Boot, Spring Security, Relational Databases, PostgreSQL, Redis, WebSockets, Spring Cloud, REST services, Maven, Docker, Hibernate, MyBatis, Liquibase, Git.
